

Andrew Gerber

Full Stack Software Engineer

814.335.1316 | agerber0902@gmail.com | Bellefonte, PA, 16823

Professional Summary

Full Stack Software Engineer with 6+ years of experience building scalable web and mobile applications, strong foundation in ASP.NET Core and backend systems engineering, with a recent focus on modern frontend architecture using React, TypeScript, and React Native. Experienced in API design, cloud infrastructure, CI/CD automation, and secure development practices across Azure and Firebase environments. Proven ability to modernize legacy systems, drive architectural decisions, and deliver production-ready applications end-to-end. Continuously expanding expertise across new technologies and cloud environments, with a passion for delivering intuitive, high-quality user experiences.

Education - The Pennsylvania State University

B.S. Computer Science - Computer Engineering

Core Skills

Frontend: React, React Native, Redux, TypeScript, JavaScript, Vite, Angular, HTML, CSS

Backend: ASP.NET Core, .NET, REST APIs, Entity Framework, Firebase Functions

Cloud & DevOps: Azure, Terraform, CI/CD Pipelines(Azure, Expo), Firebase

Data & Security: SQL Server, NoSQL, SAST, DAST, SCA, Secrets Management

Tools: Git, Postman, Swagger, Docker, Github Copilot, BMAD, ChatGPT

Professional Experience

Software Developer | Pixel and Texel | 2021 - Present

- Lead development of scalable frontend applications using React, Typescript, Redux, and Vite, delivering modern user experiences across enterprise platforms
- Design and maintain RESTful APIs and backend services in ASP.NET Core, contributing architectural decisions across frontend, backend, and infrastructure layers
- Lead modernization of legacy MVC applications through infrastructure upgrades, Terraform automation, Azure Key Vault integration, and CI/CD pipeline enhancements
- Strengthen platform reliability and security through SAST, DAST, SCA scanning, secrets management, and secure deployment workflows
- Unify multiple external data sources into internal services using SQL and NoSQL data models
- Designed and developed a custom chatbot application layer leveraging Azure AI Foundry agents, orchestrating indexed search and data retrieval workflows to map user queries to relevant part numbers and associated documents

.NET Developer | RBA Data Systems | 2019-2021

- Built full-stack features in ASP.NET using Web Pages, MVC, and Entity Framework

Published Applications

Rooted Together: Affirmations

<https://github.com/agerber0902/RootedTogether>

Conceptualized, architected, and launched a cross-platform mobile application available on the App Store using React Native, TypeScript, Redux, and Firebase.

- Designed serverless backend services using Firestore and Firebase Cloud Functions to deliver user-linked daily affirmation notifications
- Conceptualized, architected, and independently launched a production cross-platform mobile application, designing frontend, backend, data, and deployment architecture from the ground up.
- Managed end-to-end application lifecycle, including source control, automated builds, testing, and deployment workflows using GitHub and Expo
